

Where the Conversion Leaks Are

nomadinternet.com · CRO Recommendations · August 2026

The most valuable conversion mechanism on this site is the coverage check, which is being undermined by competing CTAs and a broken pricing page, causing users to abandon before seeing plans.

Prioritised findings

#	Finding	Severity	Effort	PXL
1	Conflicting value propositions Two different primary headlines dilute the core message about reliability and simplicity.	High	Low	6/10
2	Pricing page error Direct navigation to /pricing returns an error, dead-ending users and preventing them from seeing plans.	Urgent	Medium	5/10
3	Two-step form before value Users must complete two sequential forms before seeing any plan details, adding friction.	High	Medium	5/10
4	Pricing inconsistency across pages Conflicting one-time fees and monthly rates across plan pages undermine price clarity.	High	Medium	5/10
5	Ambiguous one-time costs One-time amounts are shown without labeling what they cover, creating uncertainty about equipment ownership.	Medium	Low	5/10
6	Repeated identical headings Repeated identical headings across pages and sections confuse visitors about their location.	Medium	Low	5/10
7	Competing coverage CTAs Multiple competing coverage-check CTAs split user attention and obscure the primary action.	High	Medium	4/10
8	Vague qualification claim Claim of universal qualification lacks specifics, leaving offer unclear.	Medium	Medium	4/10
9	Unsupported trust badge Trust badge 'SHOP WITH CONFIDENCE' lacks supporting guarantee or security details.	Medium	Medium	4/10

#	Finding	Severity	Effort	PXL
10	Duplicate page titles Identical page titles across pages weaken information scent and confuse navigation.	Medium	Medium	4/10

How to read this

Findings marked **verified** were measured directly and are reproducible. Everything else is a hypothesis derived from inspecting the live pages, which is why the PXL evidence questions score zero for those items. Sized opportunities describe the prize if a change works, not expected revenue: roughly 10–30% of A/B tests produce a significant win, and winners tend to overstate their true effect.
